

DHRUV PATEL

Computer Science Student | Software Developer | NJIT

Edison, NJ • (732) 532-9110 • dhruvpatel1656@gmail.com • linkedin.com/in/dhruv-patel-402a45329

PROFESSIONAL SUMMARY

Computer Science student at NJIT (GPA 3.689) with hands-on Python, Java, SQL, AI, and web application project experience, plus two years at Amazon, now as a Level 3 Process Assistant who works daily in internal process software, SCADA-controlled sortation systems, and yard and dock tools. Troubleshoots system issues, traces data discrepancies to the root cause, and leads teams to hit deadlines. Eager to bring a learn-fast, ownership mindset to a software engineering team and keep growing as a developer.

EDUCATION

New Jersey Institute of Technology (NJIT) – Newark, NJ

Sep 2024 – May 2028

B.S. in Computer Science | GPA: 3.689 / 4.0 | Student Excellence Award (Sep 2023)

TECHNICAL SKILLS

Languages	Python, Java, JavaScript, SQL (MySQL, PostgreSQL), PHP, HTML, CSS
Frameworks & Tools	FastAPI, Flask, REST APIs, Docker, Git & GitHub, GitHub Actions (CI/CD), pytest, ServiceNow
AI & Data	LLM APIs, RAG, prompt engineering, FAISS, scikit-learn, pandas, NumPy
CS Concepts	Data structures & algorithms, OOP, database design & ER modeling, operating systems, discrete math
Security & Quality	Authentication & JWT, password hashing, input validation, unit testing, debugging, root-cause analysis
Enterprise Systems	Vista, SCADA, yard management, Dock Console, OB SSP, FMC, Perspective, control systems

PROFESSIONAL EXPERIENCE

Process Assistant (L3) – Inbound, Mezz & Outbound Operations

Aug 2024 – Present

Amazon Sortation Center – Carteret, NJ

- Operate and troubleshoot Amazon's internal process software across inbound, Mezz, and outbound, including Vista, Dock Console, OB SSP, and FMC, to resolve errors fast, keep package records accurate, and hold dispatch to schedule each shift.
- Monitor SCADA-controlled conveyor and sortation systems, respond to jams, faults, and scan failures, and escalate to maintenance and IT teams to restore flow quickly, limiting downtime and protecting throughput during every busy sort shift.
- Use yard management and dock tools to track trailer arrivals, departures, and door status, coordinating with drivers and transportation partners so trailers are loaded correctly, staged in time, and depart on schedule for every scheduled CPT.
- Trace failed moves in Vista and reverse or correct container and pallet moves, reconciling system records with physical inventory to catch defects early, coach the associate involved, and keep issues from escalating into larger inventory or delivery problems.
- Track labor and attendance with Perspective, Quarterback, and Workstations, reallocating headcount in real time across chutes and lanes to meet CPT targets, clear priority work, keep blue lights low, and hold scan rates high throughout the entire shift.
- Redesigned a consolidation workflow to combine single-scan containers early, cutting a 20-pallet load to 11 pallets (about 45% fewer) and reducing the need for ad hoc transportation while easing last-minute workload for the team during peak staging.
- Train and coach associates on SOPs, safety, and system usage, and cover for Area Managers and Process Assistants during staffing shortages to keep throughput, quality, and safety on target across inbound, Mezz, and outbound operations daily.

ACADEMIC PROJECTS

AI Document Q&A Assistant (RAG) | Python, FastAPI, FAISS, LLM API

Sep 2026

- Built a retrieval-augmented generation app that lets users upload documents and ask questions, returning answers with cited source passages using text embeddings, FAISS vector search, an LLM API, and a FastAPI backend and clear setup docs.

Secure Banking Transactions API | FastAPI, PostgreSQL, Docker, GitHub Actions

Sep 2026

- Developed a banking-style REST API for accounts and transactions with JWT authentication, role-based access, a PostgreSQL database, pytest unit tests, Docker containers, and a GitHub Actions CI pipeline that tests every push to keep main stable.

Fraud Detection ML Model | Python, pandas, scikit-learn

Sep 2026

- Trained and evaluated a machine learning model to flag fraudulent card transactions on a public dataset, handling class imbalance with pandas and scikit-learn and comparing models by precision, recall, and ROC-AUC, with a written summary of trade-offs.
- Also built: Airline Luggage System (PHP, MySQL), Online Voting Form (Flask), Password Encryption Tool (Python), 2024 to 2025.

LEADERSHIP & INVOLVEMENT

President – Gujarati Undergraduate Student Association (GUSA), NJIT: leads board and 200+ person events

Jan 2025 – Present

Event Coordinator – Hindu YUVA Club, NJIT: plans cultural and educational events with volunteer teams

Sep 2024 – Present

Volunteer – BAPS Swaminarayan Temple, Edison, NJ: supports large community events and teamwork

Sep 2023 – Present
